

## **UNIT 2 - Child Study (30%)**

Candidates will complete one investigative task chosen from the following bank of tasks. The task must focus on a child 1-5 years and the time allocation for this task is 15 hours.

1. As part of their physical development young children develop fine motor skills as well as hand-eye co-ordination which enable them to carry out various activities.

Carry out research with a child of your choice, aged between 1 and 5 years old, to determine the milestones they have reached in these areas and discuss the factors that have contributed to their level of development.

2. The development of language and the ability to communicate are skills learned in early childhood.

Carry out research with a child of your choice, aged between 1 and 5 years old, to determine the milestones they have reached in these areas and discuss the factors that have contributed to their level of development.

3. Many factors affect a young child's social and emotional development.

Carry out research with a child of your choice, aged between 1 and 5 years old, to determine the milestones they have reached in these areas and discuss the factors that have contributed to their level of development.
