Community Challenge Hospitality and Catering Reducing Household Food Waste

Available for assessment from September 2015

Reducing Household Food Waste

PURPOSE

The purpose of the Community Challenge is to develop learners' skills, whilst encouraging learners to identify, develop and participate in opportunities that will benefit the community. During the Community Challenge learners will explicitly develop skills of **Planning and Organisation** and **Personal Effectiveness** and apply them in an appropriate manner.

BRIEF

We all have a social responsibility and should be aware of the challenges and opportunities we may meet on a personal level in our local community: the local area, the nearest village, town or city. During this Challenge you will focus on real-life concerns and needs through activities which aim to make a difference in the community. You will need to consider whether you need to develop and extend your skills, knowledge and understanding to be able to successfully meet the needs of the Challenge.

Wasted food is wasted resources. Reducing waste helps to save energy, reduces the risk of climate change and the need for landfill. Your **local primary school** has asked you to help develop an initiative that will benefit the **children and their parents/carers**, increasing their understanding of how to **reduce their household food waste** or costs.

Using the skills, knowledge and understanding that you have gained from your Learning Programme your task is to plan, organise and run an initiative for the children and parents/carers at the local primary school to help them reduce household food waste. You will carry out this initiative as part of a team (3-6 members) or as an individual for a minimum period of 10 hours.

This Challenge will enable you to develop as effective and responsible members of your local community. In completing the Community Challenge you will be able to recognise the contributions you can make towards improving the community in which you live and the benefits this will have for yourself, for others and for the environment. You will demonstrate how you can create and manage an action plan when developing opportunities for the community and with the use of feedback can reflect and review your personal performance in planning and carrying out the activity.
